

Non-dimensional
$$\frac{\partial T}{\partial t} + \frac{\partial T}{\partial x} = \alpha \frac{\partial^2 T}{\partial x^2} - \Lambda(T-Ts)$$

$$\frac{\partial T_s}{\partial t} = \alpha_s \frac{\partial^2 T_s}{\partial x^2} + \Lambda_s (T-Ts)$$

$$T(0,t) = T_1 \qquad \left(\frac{\partial T}{\partial t} + \frac{\partial T}{\partial x}\right) = 0$$

$$\frac{\partial T_s}{\partial x} = \frac{\partial T_s}{\partial x} = 0$$

$$T(x,0) = T_s (x,0) = 0$$

External solution planest order

$$\frac{\partial T}{\partial t} + \frac{\partial T}{\partial x} = -\Lambda(T-T_s)$$

$$\frac{\partial T_s}{\partial t} = \Lambda_s(T-T_s)$$

al setution planest order

$$\frac{\partial T}{\partial t} + \frac{\partial T}{\partial x} = -\Lambda(T-T_s)$$

$$\Rightarrow Characteristics C: \frac{dx}{dt} = 0, \frac{dT}{dt} = -\Lambda(T-T_s)$$

$$\Rightarrow Characteristics C: \frac{dx}{dt} = 0, \frac{dT_s}{dt} = \Lambda_s(T-T_s)$$

$$T = T_1$$

$$C = T_2$$

$$C = T_3 = 0$$

$$T = T_5 = 0$$

(a) 
$$\frac{dT}{dt} = -\Lambda T$$
,  $t = 0$ ,  $T = T$ ,  $\rightarrow$   
 $T = T$ ,  $e^{-\Lambda t}$  en  $x = t$  ( $c^{+}$ )
$$T_{s} = 0$$

Para XXt hoy que resolver las ecuaciones conacteristicas (\*) ruménicament? Hay una "onda de choque" en x=t (avanza con veloridad 1) donde Triene dado por (0). El término difunvo se encaya de pasar esa Ta cero en una capa delfada. Pero antes,

Para estar seguros, comparar la solución esterna de orden o resolvendo (+) por las características con la solución numerica completa

Diferencias firetas
